I. Studies on the Structure and Affinities of Cretaceous Plants. By MARIE C. STOPES, D.Sc., Ph.D., F.L.S., Lecturer in Fossil Botany in the University of Manchester, and K. FUJII, Ph.D., Assistant Professor of Botany in the Imperial University of Tokio. Communicated by D. H. SCOTT, Ph.D., F.R.S., Pres. L.S. ........................................... page 1

II. The Thyroid and Parathyroid Glands throughout Vertebrates, with Observations on some other closely related Structures. By F. D. THOMPSON. Communicated by Prof. E. A. SCHÄFER, F.R.S. .......................... 91

III. The Blood Volume of Mammals as determined by Experiments upon Rabbits, Guinea-pigs, and Mice; and its Relationship to the Body Weight and to the Surface Area expressed in a Formula. By GEORGES DREYER, M.A., M.D., Professor of Pathology in the University of Oxford, and WILLIAM RAY, B.Sc., M.B., Philip Walker Student in Pathology in the University of Oxford. Communicated by Prof. FRANCIS GUTCH, F.R.S. ............ 133

IV. The Lignite of Bovey Tracey. By CLEMENT REID, F.R.S., and ELEANOR M. REID, B.Sc. ......................................................... 161
V. The Anatomy and Morphology of the Leaves and Inflorescences of Welwitschia mirabilis. By M. G. Sykes, Girton College, Fellow of Newnham College, Cambridge. Communicated by Prof. A. C. Seward, F.R.S. page 179

VI. On the Structure, Development and Morphological Interpretation of the Pineal Organs and Adjacent Parts of the Brain in the Tuatara (Sphenodon punctatus). By Arthur Dendy, D.Sc., F.R.S., Sec. L.S., Professor of Zoology in King’s College (University of London) 227

Index to Volume 391
LIST OF ILLUSTRATIONS.

Plates 10–14.—MRS. F. D. THOMPSON on the Thyroid and Parathyroid Glands throughout Vertebrates, with Observations on some other closely related Structures.

Plates 15–16.—Mr. C. REID and Mrs. E. M. REID on the Lignite of Bovey Tracey.

Plates 17–18.—Miss M. G. SYKES on the Anatomy and Morphology of the Leaves and Inflorescences of Welwitschia mirabilis.

Plates 19–31.—Prof. A. DENDY on the Structure, Development and Morphological Interpretation of the Pineal Organs and Adjacent Parts of the Brain in the Tuatara (Sphenodon punctatus).

Plates 32–36.—Mr. H. WAGER on the Effect of Gravity upon the Movements and Aggregation of Euglena viridis, Ehrb., and other Micro-organisms.
ADVERTISEMENT.

The Committee appointed by the Royal Society to direct the publication of the Philosophical Transactions take this opportunity to acquaint the public that it fully appears, as well from the Council-books and Journals of the Society as from repeated declarations which have been made in several former Transactions, that the printing of them was always, from time to time, the single act of the respective Secretaries till the Forty-seventh Volume; the Society, as a Body, never interesting themselves any further in their publication than by occasionally recommending the revival of them to some of their Secretaries, when, from the particular circumstances of their affairs, the Transactions had happened for any length of time to be intermitted. And this seems principally to have been done with a view to satisfy the public that their usual meetings were then continued, for the improvement of knowledge and benefit of mankind: the great ends of their first institution by the Royal Charters, and which they have ever since steadily pursued.

But the Society being of late years greatly enlarged, and their communications more numerous, it was thought advisable that a Committee of their members should be appointed to reconsider the papers read before them, and select out of them such as they should judge most proper for publication in the future Transactions; which was accordingly done upon the 26th of March, 1752. And the grounds of their choice are, and will continue to be, the importance and singularity of the subjects, or the advantageous manner of treating them; without pretending to answer for the certainty of the facts, or propriety of the reasonings contained in the several papers so published, which must still rest on the credit or judgment of their respective authors.

It is likewise necessary on this occasion to remark, that it is an established rule of the Society, to which they will always adhere, never to give their opinion, as a Body,
upon any subject, either of Nature or Art, that comes before them. And therefore the thanks, which are frequently proposed from the Chair, to be given to the authors of such papers as are read at their accustomed meetings, or to the persons through whose hands they received them, are to be considered in no other light than as a matter of civility, in return for the respect shown to the Society by those communications. The like also is to be said with regard to the several projects, inventions, and curiosities of various kinds, which are often exhibited to the Society; the authors whereof, or those who exhibit them, frequently take the liberty to report, and even to certify in the public newspapers, that they have met with the highest applause and approbation. And therefore it is hoped that no regard will hereafter be paid to such reports and public notices; which in some instances have been too lightly credited, to the dishonour of the Society.
