PHILOSOPHICAL

TRANSACTIONS

OF THE

ROYAL SOCIETY OF LONDON.

SERIES B.

CONTAINING PAPERS OF A BIOLOGICAL CHARACTER.

VOL. 207.

LONDON:

PRINTED BY HARRISON AND SONS, ST. MARTIN'S LANE, W.C.,

Printers in Ordinary to His Majesty.

JUNE, 1916.
CONTENTS.

(B)

VOL. 207.

List of Illustrations ............................................. page v
Advertisement ......................................................... vii

I. The Development of the Thymus, Epithelial Bodies, and Thyroid in the Marsupialia. Part I.—Trichosurus vulpecula. By Elizabeth A. Fraser, B.Sc. (Lond.), and Prof. J. P. Hill, D.Sc., F.R.S. .......................... page 1

II. The Development of the Thymus, Epithelial Bodies, and Thyroid in the Marsupialia. Part II.—Phascolarctos, Phascolomys, and Perameles. By Elizabeth A. Fraser, B.Sc. (Lond.). Communicated by Prof. J. P. Hill, F.R.S. ......................................................... 87

III. On Williamsoniella, a New Type of Bennettitalean Flower. By H. Hamshaw Thomas, M.A., F.G.S., Fellow of Downing College, Cambridge, and Curator of the Cambridge Botanical Museum. Communicated by Prof. A. C. Seward, F.R.S. ......................................................... 113

V. The Measurement of the Rate of Heat-Loss at Body Temperature by Convection, Radiation, and Evaporation. By Leonard Hill, F.R.S., O. W. Griffith, and Martin Flack. (From the Department of Applied Physiology, Medical Research Committee.) ........................................ 183

VI. The Spread of the Excitatory Process in the Vertebrate Heart. Parts I–V. By Thomas Lewis. Communicated by Prof. E. H. Starling, F.R.S. 221

IX. On the Relation between Transpiration and Stomatal Aperture. By Sir Francis Darwin, F.R.S. ............................................................... 413

X. On the Structure and Development of the Skull and Laryngeal Cartilages of Perameles, with Notes on the Cranial Nerves. By Philippa C. Esdaile, M.Sc. (Man.), Research Fellow in Zoology, University College, Reading; formerly Honorary Research Fellow, University of Manchester. Communicated by Prof. J. P. Hill, F.R.S. ............................................................... 439

XI. The Electrical Conductivity of Echinoderm Eggs, and its Bearing on the Problems of Fertilisation and Artificial Parthenogenesis. By James Gray, M.A., Fellow of King's College, Cambridge; Captain, 5th Battalion, Queen's Royal West Surrey Regiment. Communicated by Prof. J. S. Gardiner, F.R.S. ............................................................... 481

Index to Volume ............................................................... 541
LIST OF ILLUSTRATIONS.

Plates 1–10.—Miss Elizabeth A. Fraser and Prof. J. P. Hill on the Development of the Thymus, Epithelial Bodies, and Thyroid in the Marsupialia. Part I.—Trichosurus vulpecula.

Plate 11.—Miss Elizabeth A. Fraser on the Development of the Thymus, Epithelial Bodies, and Thyroid in the Marsupialia. Part II.—Phascolarctos, Phascolomys, and Perameles.

Plates 12–14.—Mr. H. Hamshaw Thomas on Williamsoniella, a New Type of Bennettitalean Flower.

Plates 15–22.—Mr. Thomas Lewis on the Spread of the Excitatory Process in the Vertebrate Heart. Parts I–V.

Plates 26–28.—Mr. H. M. Woodcock—Observations on Coprozoic Flagellates: Together with a Suggestion as to the Significance of the Kinetonucleus in the Binucleata.

Plates 29–34.—Miss Philippa C. Esdaile on the Structure and Development of the Skull and Laryngeal Cartilages of Perameles, with Notes on the Cranial Nerves.

Plates 35 and 36.—Miss Igerne B. J. Sollas and W. J. Sollas on the Structure of the Dicynodont Skull.
ADVERTISEMENT.

The Committee appointed by the Royal Society to direct the publication of the Philosophical Transactions take this opportunity to acquaint the public that it fully appears, as well from the Council-books and Journals of the Society as from repeated declarations which have been made in several former Transactions, that the printing of them was always, from time to time, the single act of the respective Secretaries till the Forty-seventh Volume; the Society, as a Body, never interesting themselves any further in their publication than by occasionally recommending the revival of them to some of their Secretaries, when, from the particular circumstances of their affairs, the Transactions had happened for any length of time to be intermitted. And this seems principally to have been done with a view to satisfy the public that their usual meetings were then continued, for the improvement of knowledge and benefit of mankind: the great ends of their first institution by the Royal Charters, and which they have ever since steadily pursued.

But the Society being of late years greatly enlarged, and their communications more numerous, it was thought advisable that a Committee of their members should be appointed to reconsider the papers read before them, and select out of them such as they should judge most proper for publication in the future Transactions; which was accordingly done upon the 26th of March, 1752. And the grounds of their choice are, and will continue to be, the importance and singularity of the subjects, or the advantageous manner of treating them: without pretending to answer for the certainty of the facts, or propriety of the reasonings contained in the several papers so published, which must still rest on the credit or judgment of their respective authors.

It is likewise necessary on this occasion to remark, that it is an established rule of the Society, to which they will always adhere, never to give their opinion, as a Body,
upon any subject, either of Nature or Art, that comes before them. And therefore the thanks, which are frequently proposed from the Chair, to be given to the authors of such papers as are read at their accustomed meetings, or to the persons through whose hands they received them, are to be considered in no other light than as a matter of civility, in return for the respect shown to the Society by those communications. The like also is to be said with regard to the several projects, inventions, and curiosities of various kinds, which are often exhibited to the Society; the authors whereof, or those who exhibit them, frequently take the liberty to report, and even to certify in the public newspapers, that they have met with the highest applause and approbation. And therefore it is hoped that no regard will hereafter be paid to such reports and public notices; which in some instances, have been too lightly credited, to the dishonour of the Society.
