Structure of eukaryotic chromosomes and chromatin

A Discussion organized by H. G. Callan, F.R.S., and A. Klug, F.R.S.
NOTICE TO CONTRIBUTORS TO
PROCEEDINGS AND PHILOSOPHICAL TRANSACTIONS
OF THE ROYAL SOCIETY

The Royal Society welcomes suitable communications for publication in its scientific journals: papers estimated to occupy up to 24 printed pages are considered for the Proceedings and longer papers and those with numerous or large illustrations for the Philosophical Transactions.

Detailed advice on the preparation of papers to be submitted to the Society is given in a leaflet available from the Executive Secretary, The Royal Society, 6 Carlton House Terrace, London SW1Y 5AG. The ‘Instructions to authors’ are also printed in every fifth volume of the Proceedings A and B (volume numbers ending in 0 or 5). The basic requirements are: a paper should be as concise as its scientific content allows and grammatically correct; standard nomenclature, units and symbols should be used; the text (including the abstract, the list of references and figure descriptions) should be in double spaced typing on one side of the paper; any diagrams should be drawn in a size to permit blockmaking at a reduction to about one half linear, the lettering being inserted not on the original drawings but on a set of copies; where photographs are essential the layout should be designed to give the most effective presentation.

The initial submission of a paper must be through a Fellow or Foreign Member of the Society, but subsequent correspondence will be conducted direct with the author. The latest lists of Fellows and Foreign Members are to be found in the current edition of the Year Book of the Royal Society. In the event of any difficulty, an author is invited to seek the assistance of the Executive Secretary.

No page charge is levied, and the first 50 offprints of a paper are supplied to the author gratis.

The Editors particularly welcome short communications to Proceedings; as far as possible they will be given expeditious treatment both in consideration and in printing, and this will be facilitated if a paper is submitted with a firm recommendation by a Fellow.

STRUCTURE OF EUKARYOTIC
CHROMOSOMES AND CHROMATIN

A Discussion organized by H. G. Callan, F.R.S.,
and A. Klug, F.R.S.

(Discussion held 16 and 17 February 1977 – Typescripts received 15 August 1977)

Twenty-four plates

CONTENTS

I. STRUCTURE OF CHROMATIN

A. Klug, F.R.S.
 Introductory remarks 233

P. Oudet, J. E. Germond, M. Bellard, C. Spadafora and P. Chambon
 Nucleosome structure 241

M. Steinmetz, R. E. Streeck and H. G. Zaghau
 Reconstituted histone–DNA complexes 259

Ariel Prunell and R. D. Kornberg
 Relation of nucleosomes to nucleotide sequences in the rat 269

A. J. Varshavsky, V. V. Bakayev, T. G. Bakayeva, P. M. Chumackov,
 V. V. Shmatchenko and G. P. Georgiev
 On the structure of cellular and viral chromatin 275

B. M. Richards, J. F. Pardon, D. M. J. Lilley, Rosalind I. Cotter,
 J. C. Wooley and D. L. Worcester
 Nucleosome sub-structure during transcription and replication 287

E. M. Bradbury
 Histone interactions, histone modifications and chromatin structure 291

H. M. Sobell, C.-C. Tsai, S. C. Jain and T. D. Sakore
 Conformational flexibility in DNA structure and its implications in understanding
 the organization of DNA in chromatin 295

H. Zentgraf, W. Keller and Ulrike Müller
 The structure of SV40 chromatin 299

II. DISTRIBUTION OF DNA BASE SEQUENCES

P. M. B. Walker
 Introductory remarks: DNA and genes 305

H. C. Macgregor
 Some trends in the evolution of very large chromosomes 309

Vol. 283. B 997. 22

[Published 11 May 1978]
M. L. Birnstiel, A. Kressmann, W. Schaffner, R. Portmann and M. Busslinger
Aspects of the regulation of histone genes 319

A. P. Bird
The occurrence and transmission of a pattern of DNA methylation in Xenopus laevis ribosomal DNA 325

H. J. Cooke
Sequence organization of the human Y chromosome 329

III. TRANSCRIPTION

J. Paul
Introductory remarks 331

W. W. Franke and U. Scheer
Morphology of transcriptional units at different states of activity 333

J. M. Gottesfeld
Organization of transcribed regions of chromatin 343

J. Sommerville, D. B. Malcolm and H. G. Callan, F.R.S.
The organization of transcription on lampbrush chromosomes 359

J. B. Gurdon, F.R.S., A. H. Wyllie and E. M. De Robertis
The transcription and translation of DNA injected into oocytes 367

J. O. Bishop
Analysis of mRNA populations 373

E. M. De Robertis, G. A. Partington and J. B. Gurdon, F.R.S.
Selective gene expression by somatic nuclei injected into amphibian oocytes 375

R. S. Gilmour
Chromatin transcription with mercurated nucleotides 379

IV. FUNCTIONAL UNITS

H. G. Callan, F.R.S.
Introductory remarks 381

The 75s RNA transcription unit in Balbiani ring 2 and its relation to chromosome structure 383

L. Moran, M.-E. Miraault, A. P. Arrigo, M. Goldschmidt-Clermont and A. Tissières
Heat shock of Drosophila melanogaster induces the synthesis of new messenger RNAs and proteins 391

A. Worcel and C. Benyajati
Molecular architecture of Drosophila chromatin 407

R. J. Skaer
Transcription in the interbands of Drosophila 411

A. L. Bak and J. Zeuthen
Higher order structure of mitotic chromosomes 415
