PROCEEDINGS AND PHILOSOPHICAL TRANSACTIONS
OF THE ROYAL SOCIETY

Notice to contributors

The Royal Society welcomes suitable communications for publication in its scientific journals: papers estimated to occupy up to 24 printed pages are considered for the Proceedings and longer papers and those with numerous or large illustrations for the Philosophical Transactions.

Detailed advice on the preparation of papers to be submitted to the Society is given in a leaflet available from the Executive Secretary, The Royal Society, 6 Carlton House Terrace, London SW1Y 5AG. The 'Instructions to authors' are also printed in every fifth volume of the Proceedings A and B (volume numbers ending in 0 or 5). The basic requirements are: a paper should be as concise as its scientific content allows and grammatically correct; standard nomenclature, units and symbols should be used; the text (including the abstract, the list of references and figure descriptions) should be in double spaced typing on one side of the paper; any diagrams should be drawn in a size to permit blockmaking at a reduction to about one half linear, the lettering being inserted not on the original drawings but on a set of copies; where photographs are essential the layout should be designed to give the most effective presentation.

The initial submission of a paper must be through a Fellow or Foreign Member of the Society, but subsequent correspondence will be conducted direct with the author. The latest lists of Fellows and Foreign Members are to be found in the current edition of the Year Book of the Royal Society. A copy of 'Notes for the guidance of Fellows communicating papers’ is available from the Executive Secretary. In the event of any difficulty, an author is invited to seek the assistance of the Executive Secretary.

No page charge is levied, and the first 50 offprints of a paper are supplied to the author gratis.

The Editors particularly welcome short communications to Proceedings; as far as possible they will be given expeditious treatment both in consideration and in printing, and this will be facilitated if a paper is submitted with a firm recommendation by a Fellow.

Associate Editors: series B, Biological Sciences
(For Standing Orders see current Year Book)

Lord Adrian, Professor J. M. Dodd, Professor H. W. Kosterlitz
Professor K. Burton, Dr. R. M. Gaze, Professor D. Lewis
Dr. F. W. Campbell, Dr. J. B. Gurdon, Professor H. C. Longuet-Higgins
Sir John Dacie, Professor J. L. Harper, Professor H. B. Whittington

It is the policy of the Royal Society not to charge any royalty for the production of a single copy of any one article made for private study or research. Requests for the copying or reprinting of any article for any other purpose should be sent to the Royal Society.
INFLUENZA

A Discussion organized by D. A. J. Tyrrell, F.R.S., and H. G. Pereira, F.R.S.

(Discussion held 21 and 22 February 1979 — Typescripts received 24 April 1979)

[Four plates]

CONTENTS

Preface 289

E. D. Kilbourne
Influenza: viral determinants of the pathogenicity and epidemicity of an invariant disease of variable occurrence 291

Structure

P. Palese, V. R. Racaniello, U. Desesselberger, J. Young and M. Baez
Genetic structure and genetic variation of influenza viruses 299
   Discussion: R. J. C. Hart, U. Desesselberger 305

C. Scholtissek
Evolution of pandemic influenza virus strains 307

W. G. Laver, G. M. Air, R. G. Webster, W. Gerhard, C. W. Ward and T. A. A. Dopheide
The mechanism of antigenic drift in influenza virus: sequence changes in the haemagglutinin of variants selected with monoclonal hybridoma antibodies 313
   Discussion: D. A. J. Tyrrell, F.R.S. 326

R. A. Lamb and P. W. Choplin
A ninth unique influenza virus-coded polypeptide 327

J. J. Skehel, M. D. Waterfield, J. W. McCauley, K. Elder and D. C. Wiley
Studies on the structure of the haemagglutinin 335

Reproduction

A. J. Hay, J. J. Skehel and J. McCauley
Structure and synthesis of influenza virus complementary RNAs 341

B. W. J. Mahy, T. Barrett, D. J. Briedis, J. M. Brownson and A. J. Wolstenholme
Influence of the host cell on influenza virus replication 349
