Widdel, F. See Pfennig & Widdel.

Subject index

Benthic algal production in an artificial hard-water stream, 265.

Cable properties of ganglion cells, 227.
Cognitive function, neuropsychology of, Discussion, for detailed contents see pp. 1 and 2.

Discussion on neuropsychology of cognitive function; for detailed contents see pp. 1 and 2.
Discussion on sulphur bacteria; for detailed contents see pp. 429 and 430.

Ganglion cells' morphology, 227.

Honeybee brain: mushroom bodies, 309.

Morphology: Golgi study, 355.

Stereopsis, 395.

Surface interpolation, visual, 395.

Turtle retina, 355.

End of the two hundred and ninety-eighth volume – Series B
CONTENTS

Series B  Volume 298

No. 1089  25 June 1982
The neuropsychology of cognitive function
   A Discussion organized and edited by D. E. Broadbent, F.R.S., and L. Weiskrantz, F.R.S. .......................... page 1

No. 1090  27 July 1982
Retinal ganglion cells: a functional interpretation of dendritic morphology
   By C. Koch, T. Poggio and V. Torre ........................................... 227
The population and production dynamics of benthic algae in an artificial recirculating hard-water stream
   By A. F. H. Marker and H. Casey ........................................... 265

No. 1091  27 July 1982
The brain of the honeybee Apis mellifera. I. The connections and spatial organization of the mushroom bodies
   By P. G. Mobbs. [Plates 1-11] ........................................... 309

No. 1092  13 September 1982
The morphology of the bipolar cells, amacrine cells and ganglion cells in the retina of the turtle Pseudemys scripta elegans
   By Helga Kolb. [Plates 1-5] ........................................... 355
A computational theory of visual surface interpolation
   By W. E. L. Grimson ........................................... 395

No. 1093  13 September 1982
Sulphur bacteria
   [One plate] ........................................... 429

HIGHLIGHTS OF BRITISH SCIENCE

'Britain has a great tradition in natural science. From the time of the so-called scientific revolution of the mid-seventeenth century with the foundation of the Royal Society at the heart of it, British scientists have been in the forefront of advances not merely in fundamental science but also in its application to the practical problems of everyday life. Science, of course, knows no national boundaries and it owes much of its progress and vitality to the free exchange of information and ideas between scientists in all countries. It is nevertheless true that, for a variety of reasons, some countries, of which Britain is one, have made contributions out of all proportion to their physical size and population. Today we are in the midst of a worldwide economic recession which has indeed affected Britain more severely than some other highly industrialized nations. Since economic progress and with it our living standards depend nowadays almost entirely on advances in science and in technology based upon it, it is perhaps not surprising that some members of the public should wonder whether we have fallen behind other nations and whether our expenditure on science and scientific research is being misdirected. Nothing could be further from the truth. Our record during the past twenty-five years is an enviable one and our scientific research is vigorous as ever, flushed with success and full of promise. Britain has made and continues to make outstanding contributions in many and diverse fields of science. Some of these are set out in this book and it is my hope that its contents will not only stimulate appreciation of some highlights in British science but will indicate also its promise for the future.'

Extract from Lord Todd's Preface

CONTENTS

Discoveries about the universe
Recent advances in weather forecasting
Research in seas and oceans
Contributions of scientific discoveries to increases in agricultural productivity
Science and the development of nuclear energy
The jubilant electron
Developments in electron microscopy and microanalysis
Chemistry in microtime
The intracellular electrode: 25 years of research in cellular electro-physiology
Molecules of life
High blood pressure: the evolution of drug treatment: British contribution

240 pages  44 plates

ISBN 0 85403 104 9

Price including packing and postage
£8.00 (U.K. addresses) £8.25 (overseas addresses)
