PROCEEDINGS AND PHILOSOPHICAL TRANSACTIONS
OF THE ROYAL SOCIETY

Notice to contributors

The Royal Society welcomes suitable communications for publication in its scientific journals: papers estimated to occupy up to 24 printed pages are considered for the Proceedings and longer papers and those with numerous or large illustrations for the Philosophical Transactions.

Detailed advice on the preparation of papers to be submitted to the Society is given in a leaflet available from the Executive Secretary, The Royal Society, 6 Carlton House Terrace, London SW1Y 5AG. The ‘Instructions to authors’ are also printed in every fifth volume of the Proceedings A and B (volume numbers ending in 0 or 5). The basic requirements are: a paper should be as concise as its scientific content allows and grammatically correct; standard nomenclature, units and symbols should be used; the text (including the abstract, the list of references and figure descriptions) should be in double spaced typing on one side of the paper. A leaflet giving detailed advice on the preparation of illustrations is available from the Executive Secretary; diagrams should be expertly drawn at about twice the proposed final size, preferably with lettering in the correct style but if this is not possible the lettering should be inserted not on the original drawings but on a set of copies; where photographs are essential the layout should be designed to give the most effective presentation.

The initial submission of a paper must be through a Fellow or Foreign Member of the Society, but subsequent correspondence will be conducted direct with the author. The latest lists of Fellows and Foreign Members are to be found in the current edition of the Year Book of the Royal Society. A copy of ‘Notes for the guidance of Fellows communicating papers’ is available from the Executive Secretary. In the event of any difficulty, an author is invited to seek the assistance of the Executive Secretary.

No page charge is levied, and the first 50 offprints of a paper are supplied to the author gratis.

The Editors particularly welcome short communications to Proceedings; as far as possible they will be given expeditious treatment both in consideration and in printing, and this will be facilitated if a paper is submitted with a firm recommendation by a Fellow.

It is the policy of the Royal Society not to charge any royalty for the production of a single copy of any one article made for private study or research. Requests for the copying or reprinting of any article for any other purpose should be sent to the Royal Society.
MOLECULAR BIOLOGY OF CELL LOCOMOTION

A Discussion organized and edited by
H. E. Huxley, F.R.S., D. Bray and A. G. Weeds

(Discussion held 24 and 25 March 1982 – Typescripts received 22 June 1982)

[Twenty-three plates]

CONTENTS

WHAT ARE THE BASIC CHARACTERISTICS OF
CELL LOCOMOTION?

G. A. Dunn and S. W. Paddock
Analysing the motile behaviour of cells: a general approach with special reference to pairs of cells in collision 147

J. M. Vasiliev
Spreading and locomotion of tissue cells: factors controlling the distribution of pseudopodia 159

D. A. Rees, F.R.S., J. R. Couchman, C. G. Smith, Anne Woods and G. Wilson
Cell–substratum interactions in the adhesion and locomotion of fibroblasts 169

C. C. Wylie and Janet Heasman
Effects of the substratum on the migration of primordial germ cells 177

WHAT STRUCTURAL COMPONENTS ARE INVOLVED
IN THESE MOVEMENTS?

D. L. Taylor and M. Fechheimer
Cytoplasmic structure and contractility: the solation–contraction coupling hypothesis 185

Discussion: D. M. Shotton 197

M. Schliwa, Katherine B. Pryzwansky and J. van Blerkom
Implications of cytoskeletal interactions for cellular architecture and behaviour 199

K. Weber and J. R. Glenney, Jr
Microfilament–membrane interaction: the brush border of intestinal epithelial cells as a model 207

Discussion: D. M. Shotton 214
JANET M. OLIVER AND R. D. BERLIN
Distribution of receptors and functions on cell surfaces: quantitation of ligand–receptor mobility and a new model for the control of plasma membrane topography 215

WHAT ARE THE BIOCHEMICAL PROPERTIES OF THESE COMPONENTS?

Actin and myosin function in *Acanthamoeba* 237

J. A. SPUDICH, J. D. PARDEE, P. A. SIMPSON, K. YAMAMOTO, E. R. KUCZMARSKI AND L. STRYER
Actin and myosin: control of filament assembly

Discussion: D. M. Shotton 261

The capactins, a class of proteins that cap the ends of actin filaments 263

T. P. STOSSEL
The structure of cortical cytoplasm 275

K. BURRIDGE, T. KELLY AND L. CONNELL
Proteins involved in the attachment of actin to the plasma membrane 291

V. BENNETT, J. DAVIS AND W. E. FOWLER
Immunoreactive forms of erythrocyte spectrin and ankyrin in brain 301

R. J. LASEK
Translocation of the neuronal cytoskeleton and axonal locomotion

Discussion: R. J. ADAMS 326
