This handbook contains a very great deal of information on SI (the International System of Units), symbols for physical quantities, recommended forms for many aspects of scientific writing including mathematical presentation, labelling of graphs and tables, preferred placements and type founts for subscripts and superscripts, favoured abbreviations, etc. It also includes recommended values of physical constants. While SI and other internationally recommended practices are emphasized, values of conversion factors are given for use with imperial units and other units outside SI. References to original international authority are quoted.

Its compact size makes Quantities, Units, and Symbols an invaluable aid for scientific writing for all authors who wish to follow modern practice especially in physics and chemistry. Equally it should be an immediately available guide for teachers in higher education many of whom will wish their students to own a copy. It is also invaluable for the reader who has found some unfamiliar notation or terminology, not least when he has strayed from his own narrow specialism.

The contents include:
- Physical quantities and symbols for physical quantities
- Units and symbols for units
- Numbers
- Recommended mathematical symbols
- Chemical elements, nuclides, and particles
- Quantum states
- Nuclear physics
- Thermodynamic results
- Galvanic cells
- Some common abbreviations
- Recommended values of physical constants
- Sources
- Bibliography

To encourage the widespread availability and use of Q.U.S. (as it is commonly known) the following special prices are offered for orders for multiple copies:

THE PLANETS TODAY
A SYMPOSIUM ON PLANETARY SCIENCE
IN CELEBRATION OF THE QUINCENTENARY OF
NICOLAUS COPERNICUS 1473 TO 1543

CONTENTS

PREFACE
Sir Harrie Massey, Sec.R.S. and W. H. McCrea, F.R.S.
NICOLAUS COPERNICUS (1473 to 1543)
J. R. Ravetz
SOME ASPECTS OF THE PHYSICS OF THE MOON
S. K. Runcorn, F.R.S.
MARS AND VENUS
R. M. Goody
JUPITER AND SATURN
R. Hide, F.R.S.
THE DYNAMICS OF THE PLANETS AND THEIR SATELLITES
G. A. Wilkins and A. T. Sinclair
THE WORK OF NICOLAUS COPERNICUS
Sir Fred Hoyle, F.R.S.

114 pages Frontispiece and 15 plates (cloth bound)
Price: £4.50 (U.K. addresses) £4.65 (overseas)

FOOD TECHNOLOGY
IN THE 1980s

This Royal Society symposium on ‘food technology in the 1980s’ recognized the important contribution food science and technology has made so far to the feeding of our ever growing urban population. A truly interdisciplinary scientific approach is needed encompassing among others nutrition, biochemistry, microbiology and physical chemistry to advance the multitude of processing and preservation techniques, satisfying at the same time the socio-economic, toxicological, and legal constraints placed on any completely new or improved technology today and more so in the future.

The innovative culinary art and craft of great chefs of the 19th century has moved from the restaurant to the food factory. All the large-scale processing techniques discussed must therefore satisfy the visual, olfactory, gustatory and tactile human senses to find consumer acceptability. Added to this must be suitable transport and storage conditions as a vital part in the chain linking food all the way from being grown on the farm via the processor and distributor to the household table.

Every aspect of this food chain is reviewed and discussed in this book.

198 pages (cloth bound)
