Predictions in the brain: using our past to prepare for the future
Papers of a Theme Issue compiled and edited by Moshe Bar

Introduction
Predictions: a universal principle in the operation of the human brain
M. Bar

Articles
The neurobiology of memory based predictions
H. Eichenbaum & N. J. Fortin
Prediction, sequences and the hippocampus
J. Lisman & A. D. Redish
Sequence memory for prediction, inference and behaviour
J. Hawkins, D. George & J. Niemasik
Predictive coding under the free-energy principle
K. Friston & S. Kiebel
Cortical and subcortical predictive dynamics and learning during perception, cognition, emotion and action
S. Grossberg
The proactive brain: memory for predictions
M. Bar
On the nature of medial temporal lobe contributions to the constructive simulation of future events
D. L. Schacter & D. R. Addis
Predicting not to predict too much: how the cellular machinery of memory anticipates the uncertain future
Y. Dudai
The construction system of the brain
D. Hassabis & E. A. Maguire
Imagining predictions: mental imagery as mental emulation
S. T. Moulton & S. M. Kosslyn
Simulation, situated conceptualization, and prediction
L. W. Barsalou
Structured event complexes in the medial prefrontal cortex support counterfactual representations for future planning
A. R. Barbey, F. Krueger & J. Grafman
The prediction imperative as the basis for self-awareness
R. R. Llinás & S. Roy
Inferences about mental states
J. P. Mitchell
Mental time travel and the shaping of the human mind
T. Suddendorf, D. R. Addis & M. C. Corballis
See it with feeling: affective predictions during object perception
L. F. Barrett & M. Bar
Why the brain talks to itself: sources of error in emotional prediction
D. T. Gilbert & T. D. Wilson
