

Word learning and lexical development across the lifespan

Papers of a Theme issue compiled and edited by M. Gareth Gaskell and Andrew W. Ellis

Contents

Introduction

- Word learning and lexical development across the lifespan** **3607**
M. G. Gaskell and A. W. Ellis

Articles

- Contributions of infant word learning to language development** **3617**
D. Swingley
- Lexical–semantic priming effects during infancy** **3633**
N. Arias-Trejo and K. Plunkett
- Bilingual beginnings to learning words** **3649**
J. F. Werker, K. Byers-Heinlein and C. T. Fennell
- Form–meaning links in the development of visual word recognition** **3665**
K. Nation
- Word learning and the cerebral hemispheres: from serial to parallel processing of written words** **3675**
A. W. Ellis, R. Ferreira, P. Cathles-Hagan, K. Holt, L. Jarvis and L. Barca
- Non-native phonemes in adult word learning: evidence from the N400m** **3697**
C. Dobel, L. Lagemann and P. Zwitserlood
- Neurophysiological mechanisms involved in language learning in adults** **3711**
A. Rodríguez-Fornells, T. Cunillera, A. Mestres-Missé and R. de Diego-Balaguer
- A model linking immediate serial recall, the Hebb repetition effect and the learning of phonological word forms** **3737**
M. P. A. Page and D. Norris
- Word learning, phonological short-term memory, phonotactic probability and long-term memory: towards an integrated framework** **3755**
P. Gupta and J. Tisdale
- A complementary systems account of word learning: neural and behavioural evidence** **3773**
M. H. Davis and M. G. Gaskell
