Word learning and lexical development across the lifespan

Papers of a Theme issue compiled and edited by M. Gareth Gaskell and Andrew W. Ellis

Introduction
Word learning and lexical development across the lifespan
M. G. Gaskell & A. W. Ellis

Articles
Contributions of infant word learning to language development
D. Swingley

Lexical–semantic priming effects during infancy
N. Arias-Trejo & K. Plunkett

Bilingual beginnings to learning words
J. F. Werker, K. Byers-Heinlein & C. F. Fennell

Form-meaning links in the development of visual word recognition
K. Nation

Word learning and the cerebral hemispheres: from serial to parallel processing of written words
A. W. Ellis, B. Ferreira, P. Cahill-Hagan, K. Holt, L. Jarvis & L. Barca

Non-native phonemes in adult word learning: evidence from the N400m
C. Dobel, L. Lagemann & P. Zwitserlood

Neuropsychological mechanisms involved in language learning in adults

A model linking immediate serial recall, the Hebb repetition effect and the learning of phonological word forms
M. P. A. Page & D. Norris

Word learning, phonological short-term memory, phonotactic probability and long-term memory: towards an integrated framework
P. Gupta & J. Tisdale

A complementary systems account of word learning: neural and behavioural evidence
M. H. Davis & M. G. Gaskell
