Cover image: Edith's checkerspot butterfly (Euphydryas editha quino) ovipositing on blooming Plantago erecta. Despite its juicy appearance, this plant is likely to senesce in less than a month, thereby starving the caterpillars: an example of phenological asynchrony between closely-interacting species. (See Singer & Parmesan in this issue, pp. 3161–3176).

The Royal Society, the national academy of science of the UK and the Commonwealth, is at the cutting edge of scientific thinking. We support many top young scientists, engineers and technologists, influence science policy, website, scientific issues with the public and much more. We are an independent, charitable body and derive our authoritative status from over 1400 Fellows and many more. We are an independent, charitable body and derive our authoritative status from over 1400 Fellows and Members.

During 2010, we are celebrating the Royal Society’s 350th anniversary. As part of this, there will be an exciting programme of activities - exhibitions, lectures, conferences, a new book, a vast science festival on the South Bank in London, television and radio broadcasting and much more besides.

Our mission: to expand knowledge and further the role of science and engineering in making the world a better place.

The Royal Society’s strategic priorities are to:

• invest in future scientific leaders and in innovation;
• influence policymaking with the best scientific advice;
• foster science and mathematics education;
• increase access to the best science internationally; and
• inspire an interest in the joy, wonder and excitement of scientific discovery.

For further information on the Society’s activities, please contact the following departments on the extension listed by dialling 040 (020) 7680 8500 or visit the Society’s Web site (www.royalsociety.org).

Research Support (UK grants and fellowships): 2542
International travel Grants: 2555
Newton International Fellowships: 2559
Science Advice: 2569
Science Communication:
Library and Information Services: 2606
