The ocular lens: a classic model for development, physiology and disease

Papers of a Theme issue compiled and edited by Michael A. Wride and I. Michael Wormstone

Contents

Introduction
The ocular lens: a classic model for development, physiology and disease
   I. M. Wormstone and M. A. Wride 1190

Articles
The lens: a classical model of embryonic induction providing new insights into cell determination in early development
   L. Gunhaga 1193

Understanding the role of growth factors in embryonic development: insights from the lens
   F. J. Lovicu, J. W. McAvoy and R. U. de Iongh 1204

Lens fibre cell differentiation and organelle loss: many paths lead to clarity
   M. A. Wride 1219

Clinical and experimental advances in congenital and paediatric cataracts
   A. Churchill and J. Graw 1234

Biological glass: structural determinants of eye lens transparency
   S. Bassnett, Y. Shi and G. F. J. M. Vrensen 1250

Homeostasis in the vertebrate lens: mechanisms of solute exchange

The ageing lens and cataract: a model of normal and pathological ageing
   R. Michael and A. J. Bron 1278

Vitreoretinal influences on lens function and cataract
   D. C. Beebe, N. M. Holekamp, C. Siegfried and Y.-B. Shui 1293

The lens as a model for fibrotic disease
   J. A. Eldred, L. J. Dawes and I. M. Wormstone 1301

Corrections
Disgust as an adaptive system for disease avoidance behaviour
   V. Curtis, M. de Barra and R. Auinger 1320
