Animal minds: from computation to evolution

Papers of a Discussion Meeting Issue organized and edited by Uri Grodzinski, Nicola S. Clayton and Alex Thornton

Contents

Introduction
Animal minds: from computation to evolution
A. Thornton, N. S. Clayton and U. Grodzinski 2670

Articles
What is comparable in comparative cognition?
L. Chittka, S. J. Rossiter, P. Skorupski and C. Fernando 2677

Coevolution of learning and data-acquisition mechanisms: a model for cognitive evolution
A. Lotem and J. Y. Halpern 2686

Simple minds: a qualified defence of associative learning
C. Heyes 2695

The brain's connective core and its role in animal cognition
M. Shanahan 2704

Cognition in insects
B. Webb 2715

Biological and artificial cognition: what can we learn about mechanisms by modelling physical cognition problems using artificial intelligence planning techniques?
J. Chappell and N. Hawes 2723

Associative learning and animal cognition
A. Dickinson 2733

Chimpanzee ‘folk physics’: bringing failures into focus
A. Seed, E. Seddon, B. Greene and J. Call 2743

Are there geniuses among the apes?
E. Herrmann and J. Call 2753

Linking behavioural syndromes and cognition: a behavioural ecology perspective
A. Sih and M. Del Giudice 2762

Individual variation in cognitive performance: developmental and evolutionary perspectives
A. Thornton and D. Lukas 2773

Core systems of geometry in animal minds
E. S. Spelke and S. A. Lee 2784

Modularity, comparative cognition and human uniqueness
S. J. Shettleworth 2794
