Life sciences

AIMS AND SCOPE
Phil. Trans. R. Soc. B is devoted to a specific area of the biological sciences. This area will define a research frontier that is advancing rapidly, often bridging traditional disciplines. Phil. Trans. R. Soc. B is essential reading for scientists working across the biological sciences. It publishes papers on the following cluster areas: neuroscience and cognition; organisational and evolutionary biology; cell and developmental biology; and health and disease. As well as theme issues, the journal publishes papers from the Royal Society’s biological discussion meetings.

Conditions of publication
Phil. Trans. R. Soc. B articles are published regularly online and in print issues twice a month. Along with all Royal Society journals, we are committed to archiving and providing perpetual access. The journal also offers the facility for including Electronic Supplementary Material (ESM) to papers. Contents of the ESM might include details of methods, derivations of equations, large tables of data, DNA sequences and computer programs. However, the printed version must include enough detail to satisfy most non-specialist readers. Supplementary data up to 10Mb is placed on the Society’s website free of charge. Larger datasets must be deposited in recognised public domain databases by the author.

The Royal Society, the national academy of science of the UK and the Commonwealth, is at the cutting edge of scientific progress. We support many top young scientists, engineers and technologists, influence science policy, debate scientific issues with the public and much more. We are an independent, charitable body and derive our authoritative status from over 1400 Fellows and Foreign Members. Our mission: to expand knowledge and further the role of science and engineering in making the world a better place. The Royal Society’s strategic priorities are to:
• Invest in future scientific leaders and in innovation,
• Influence policymaking with the best scientific advice,
• Invigorate science and mathematics education,
• Increase access to the best science internationally, and
• Inspire an interest in the joy, wonder and excitement of scientific discovery.

For further information on the Society’s activities, please contact the following departments on the extensions listed by dialing +44 (0)20 7839 5601, or visit the Society’s Web site (royalsociety.org).
