GUIDANCE FOR AUTHORS

Selection criteria

Theme issue topics are selected from proposals submitted to the journal. Each issue is guest edited by one or more experts in the field who invite all contributors (the journal does not accept unsolicited stand-alone papers). The criteria for selection of topics are scientific excellence, originality and interest across disciplines within biology. The Editor is responsible for all decisions on proposals and makes these decisions based on the reports received from the referees and/or Editorial Board members.

Publishing format

Phil. Trans. R. Soc. B articles are published regularly online and in print issues twice a month. Along with all Royal Society journals, we are committed to archiving and providing perpetual access. The journal also offers the facility for including Electronic Supplementary Material (ESM) to papers. Contents of the ESM might include details of methods, derivations of equations, large tables of data, DNA sequences and computer programs.

Conditions of publication

Articles must not have been published previously, nor be under consideration for publication elsewhere. The main findings of the article should not have been reported in the mass media. Like many journals, Phil. Trans. R. Soc. B employs a strict embargo policy where the reporting of a scientific article by the media is embargoed until a specific time. The Editor has final authority in all matters relating to publication.

Electronic Submission details

For full submission guidelines and access to all journal content please visit the Phil. Trans. R. Soc. B website at rstb.royalsocietypublishing.org.

The Royal Society, the national academy of science of the UK and the Commonwealth, is at the cutting edge of scientific progress. We support many top young scientists, engineers and technologists; influence science policy; debate scientific issues with the public and much more. We are an independent, charitable body and derive our authoritative status from over 1400 Fellows and Foreign Members.

Our mission: to expand knowledge and further the role of science and engineering in making the world a better place.

The Royal Society’s strategic priorities are to:

• Invest in future scientific leaders and innovation;
• Influence policymaking with the best scientific advice;
• Invigorate science and mathematics education;
• Increase access to the best science internationally, and;
• Inspire an interest in the joy, wonder and excitement of scientific discovery.

For further information on the Society’s activities, please contact the following departments on the extensions listed by dialling +44 (0)20 7451 2633, or visit the Society’s Web site (royalsociety.org).

Timing in neurobiological processes: from genes to behaviour

Papers of a Theme Issue compiled and edited by Valter Tucci, Catalin V. Buhusi, Randy Gallistel and Warren H. Meck

Preface
Towards an integrated understanding of the biology of timing
V Tucci, CV Buhusi, R Gallistel & WH Meck

Articles
Minutes, days and years: molecular interactions among different scales of biological timing
DA Golombek, IL Bussi & PV Agostino
Parent-of-origin genetic background affects the transcriptional levels of circadian and neuronal plasticity genes following sleep loss
F Tinarelli, C Garca-Larca, F Nicassio & V Tucci
Relative timing: from behaviour to neurons
SM Aghdaee, L Battelli & JA Assad
Timing in reward and decision processes
MA Bermudez & W Schultz
Action, time and the basal ganglia
HH Yin
Comparison of interval timing behaviour in mice following dorsal or ventral hippocampal lesions with mice having δ-opioid receptor gene deletion
B Yin & WH Meck
Prospective and retrospective duration memory in the hippocampus: is time in the foreground or background?
CJ MacDonald
Cognitive assessment of mice strains heterozygous for cell-adhesion genes reveals strain-specific alterations in timing
CR Gallistel, V Tucci, PM Nolan, M Schachner, J Jakcovec & L Barboza
Time-based reward maximization
B Cavanagh, M Zeki & P Balto
Zebrafish forebrain and temporal conditioning
R-K Cheng, SJ Jesuthasan & TB Penney
What is all the noise about in interval timing?
SA Oprisan & CV Buhusi
Timing as an intrinsic property of neural networks: evidence from in vivo and in vitro experiments
A Goel & DV Buonomano
Reading spike timing without a clock: intrinsic decoding of spike trains
S Panzeri, BAA Ince, ME Diamond & C Kayser
