# After 2015: infectious diseases in a new era of health and development

Papers of a Theme Issue compiled and edited by Christopher Dye and Anne O’Garra

## Preface

The science of infectious diseases

C. Dye & A. O’Garra

## Articles

### After 2015: Infectious diseases in a new era of health and development

C. Dye

The application of transcriptional blood signatures to enhance our understanding of the host response to infection: the example of tuberculosis

S. Blankley, MPR Berry, CM Graham, CI Bloom, M Lipman & A O’Garra

Human genetics of tuberculosis: a long and winding road

L. Abib, J El-Baghdadi, AA Bousfiha, JL Casanova & E Schurr

The ongoing challenge of latent tuberculosis

H. Esmail, CE Barry 3rd, DJ Young & RJ Wilkinson

Immune responses during spontaneous control of HIV and AIDS: what is the hope for a cure?

A. Saez-Cirion, B Jacquelin, F Barré-Sinoussi & M Müller-Trutwin

The contribution of mass drug administration to global health: past, present and future

JP Webster, DH Molyneux, PJ Hotez & A Fenwick

The coverage and frequency of mass drug administration required to eliminate persistent transmission of soil-transmitted helminths

R Anderson, J Truscott & TD Hollingsworth

Who will develop new antibacterial agents?

ST Cole

The contribution of vaccination to global health: past, present and future

B Greenwood

The role of vector control in stopping the transmission of malaria: threats and opportunities

J Hemingway

Heritable strategies for controlling insect vectors of disease

A Burt
