Contents

Theme issue: The bacterial cell envelope

INTRODUCTION
The bacterial cell envelope
C Kleanthous and JP Armitage 20150019

ARTICLES
The bacterial divisome: ready for its close-up
VW Rowlett and W Margolin 20150028

Channel crossing: how are proteins shipped across the bacterial plasma membrane?
I Collinson, RA Corey and WJ Allen 20150025

Activities and regulation of peptidoglycan synthases
AJF Egan, J Biboy, I van’t Veer, E Breukink and W Vollmer 20150031

Bacterial cell wall composition and the influence of antibiotics by cell-wall and whole-cell NMR
JAH Romaniuk and L Cegelski 20150024

Lipopolysaccharide transport to the cell surface: biosynthesis and extraction from the inner membrane
BW Simpson, JM May, DJ Sherman, D Kahne and N Ruiz 20150029

Lipopolysaccharide transport to the cell surface: periplasmic transport and assembly into the outer membrane
JM May, DJ Sherman, BW Simpson, N Ruiz and D Kahne 20150027

Outer membrane protein biogenesis in Gram-negative bacteria
SE Rollauer, MA Sooreshjani, N Noinaj and SK Buchanan 20150023

A combined kinetic push and thermodynamic pull as driving forces for outer membrane protein sorting and folding in bacteria
KG Fleming 20150026

Outer membrane lipoprotein biogenesis: Lol is not the end
A Konovalova and TJ Silhavy 20150030

Type III secretion systems: the bacterial flagellum and the injectisome
A Diepold and JP Armitage 20150020

Type VI secretion system: secretion by a contractile nanomachine
M Basler 20150021
