Continuing its long history of influential scientific publishing, Phil. Trans. R. Soc. B publishes high quality theme issues on topics of current importance and general interest within the life sciences, guest-edited by leading authorities and comprising new research, reviews and opinions from prominent researchers. Each issue aims to create an original and authoritative synthesis, often bridging traditional disciplines, which showcases current developments and provides a foundation for future research, applications and policy decisions.

Cover image
Penis fencing pair of the tropical marine flatworm Pseudoceros bifurcus with everted, syringe-like penis. Since flatworms are hermaphroditic, their sexual interests are identical, but incompatible: both individuals try to forcefully inject sperm into the other, while attempting to minimize harmful stabs by the partner. As a consequence, a form of duelling ensues.
