Discussion meeting issue: Integrating Hebbian and homeostatic plasticity

INTRODUCTION
Integrating Hebbian and homeostatic plasticity: introduction
K Fox and M Stryker

ARTICLES
Glutamatergic synapses are structurally and biochemically complex because of multiple plasticity processes: long-term potentiation, long-term depression, short-term potentiation and scaling
J Lisman

The dialectic of Hebb and homeostasis
GG Turrigiano

Hebbian plasticity requires compensatory processes on multiple timescales
F Zenke and W Gerstner

Gradation (approx. 10 size states) of synaptic strength by quantal addition of structural modules
KKL Liu, MF Hagan and JE Lisman

Functional consequences of pre- and postsynaptic expression of synaptic plasticity
RP Costa, BEP Mizusaki, PJ Sjöström and MCW van Rossum

Astrocytic control of synaptic function
T Papouin, J Dunphy, M Tolman, JC Foley and PG Haydon

Multiple shared mechanisms for homeostatic plasticity in rodent somatosensory and visual cortex
MA Gainey and DE Feldman

Homeostatic plasticity mechanisms in mouse V1
M Kaneko and MP Stryker

Experience-dependent homeostasis of ‘noise’ at inhibitory synapses preserves information coding in adult visual cortex
M Gao, JL Whitt, S Huang, A Lee, SMihalas, A Kirkwood and H-K Lee

Enhancement of visual cortex plasticity by dark exposure
I Erchova, A Vasalauskaite, V Longo and F Sengpiel

A metaplasticity view of the interaction between homeostatic and Hebbian plasticity
AX Yee, Y-T Hsu and L Chen

Time-course and mechanisms of homeostatic plasticity in layers 2/3 and 5 of the barrel cortex
S Glazewski, S Greenhill and K Fox

Variance and invariance of neuronal long-term representations
C Clopath, T Bonhoeffer, M Hübener and T Rose

Tumour necrosis factor-mediated homeostatic synaptic plasticity in behavioural models: testing a role in maternal immune activation
SC Konefal and D Stellwagen

Integrating Hebbian and homeostatic plasticity: the current state of the field and future research directions
